K&M ARBOR PRESS

- This rugged press is used with Hand Dies at your home loading bench or at the range. Integral design does not require press to be clamped to your loading bench.
- “Feel” is important when seating or sizing bullets and the internal toggle link design allows for an exceptionally smooth tool.
- Compact size to easily fit in your loading box.
- Press working height is adjustable from 2.9” to 6.2” by loosening (4) screws on the back of the column. Minimum stroke of 0.9”.
- Available force measurement option mounts to the ram and uses a dial indicator where 0.001” of deflection equates to one pound force.

See website
for details.
