ERGO HOLDER for MICRO-ADJUSTABLE NECK TURNER

- Ergo Holder with Micro-Adjustable Neck Turner installed.

- Ergonomic shape is easy to hold and the large aluminum mass acts as a heat sink to help dissipate heat from the pilot during turning.

- Dial indicator use is improved as the entire assembly is very easy to hold during the turning process.

- To install, simply insert the Micro-Adjustable Neck Turner into the Ergo Holder and lightly snug up the set screw with the supplied 1/8" hex key.
- If you are using a Pilot Jack, simply remove it from the Neck Turner body once the pilot is set and secured into position.
